## CRYSTAL LAKE + NEWMONT = NORTHWEST B.C.'S

## NEXT HOME RUN OPPORTUNITY

With unparalleled boots-on-the-ground research, **BMR** has consistently had its pulse on Northwest British Columbia, correctly predicting the last two Big Discoveries - Nickel Mountain in **2017** and Saddle North in **2018**. The moves in those **2** stocks, especially **Garibaldi Resources' (GGI, TSXV)** dramatic run from **14 cents** to **\$5**, were life-changing moments for many investors.

**Get ready for #3, another "crystal clear" opportunity following very recent news and exhaustive due diligence by our research team.**

**CLM'S** Newmont Lake Project is described by Dr. Peter Lightfoot as *"vast tracts of unexplored and underexplored ground to feed an already large pipeline of quality targets rarely seen on one property."*

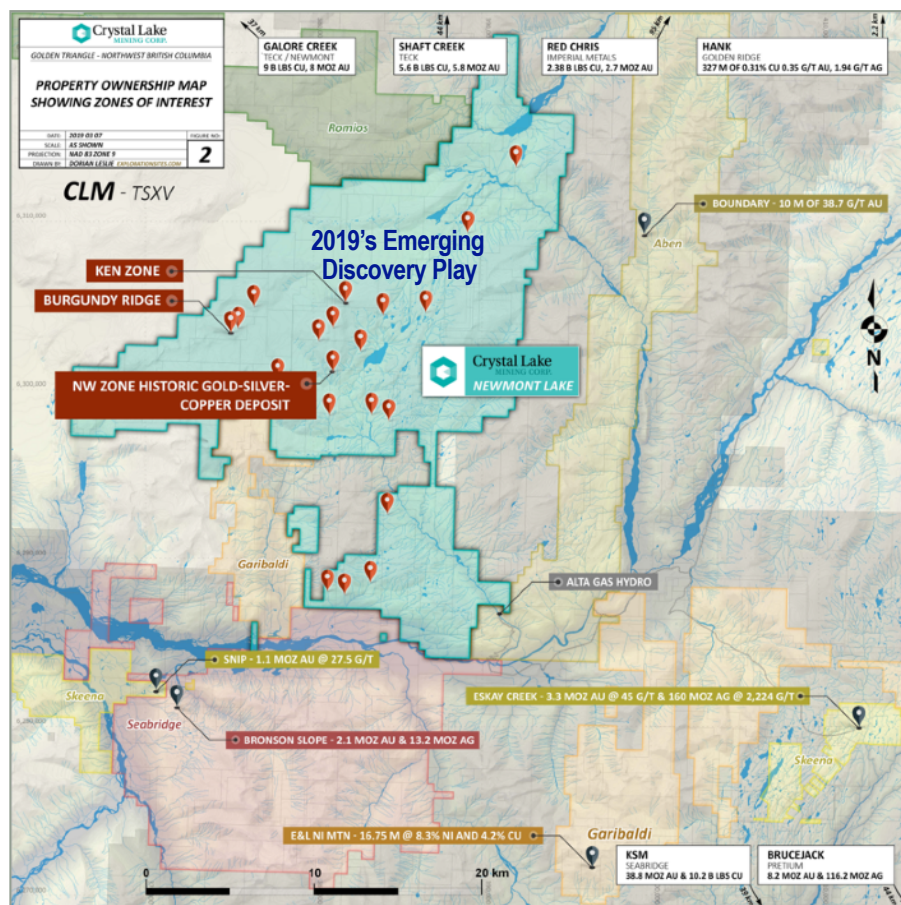

Dr. Lightfoot, pictured on the right, was instrumental in the discovery of the Golden Triangle's first magmatic Nickel massive sulphide system at Nickel Mountain. He has been joined by other technical experts in a game-changing reinterpretation of **Romios Gold's (RG, TSXV)** Newmont Lake Project which

**Crystal Lake** can earn **100%** of as early as this summer.

**CLM:TSXV**

*The next Big Discovery in NW B.C., triggering another stock-buying frenzy, is going to occur in the broader Eskay region beginning about 20 km northwest of Eskay Creek where Crystal Lake Mining (CLM, TSXV) cut through huge barriers to entry in acquiring a stellar 430 km<sup>2</sup> project, one of the largest in this prolific district.*

**Cole Evans at Burgundy Ridge**  
**HEG Exploration Services**

Armed with a fresh geological model, including evidence that a major **"heat engine"** is driving many kilometers of exciting mineral occurrences, the **Crystal Lake** team is targeting high-grade **Gold** deposits and rich porphyry systems. But all discovery possibilities are on the table given such a robust geological environment, even the potential for the district's next big Nickel find.

### **Victory at Burgundy Ridge**

At stunning speed, shortly after signing the deal with **Romios** last September, Crystal Lake initiated a first-ever drill program at Burgundy Ridge in extremely challenging mountaintop winter conditions (4 RC

holes to maximum depths of **150** meters).

That gamble paid off with assay results March **7** confirming a new grassroots discovery of a multi-element Copper-rich porphyry/skarn system that delivered even higher-grade intervals (Copper + other metals) than the first **4** drill holes at **GT Gold's (GTT, TSX-V)** Saddle North in late **2017** as a prelude to that big discovery.

But here's where it gets **really** exciting:

- Burgundy Ridge is just one of more than **2** dozen known mineral zones and occurrences within a graben structure bounded by the **20-km** long McLymont Fault;
- The Newmont Lake Project is a classic Eskay district and Northwest B.C. scenario for world class porphyry systems adjacent to a high-grade **Gold** environment associated with a major fault (historical drilling returned **55** g/t Au over **11** meters in the Northwest **Gold** zone, and multiple other high-grade occurrences have been recorded over a broad area along the fault);
- Very little work was carried out by **Romios** over the last **7** years when glacial retreat has been at its most extreme. As a result, geologists believe they will find newly-exposed mineralization and spectacular new targets over extensive areas from one end of the project to another.

***The Right Time.  
The Right Area.  
The Right People.***

- The outlook for the **Venture** and metals markets is better than at any point since the beginning of **2016**;
- The metal endowment of the Eskay region is truly extraordinary, and a record amount of exploration investment is expected to flow into this area in **2019**;
- Crystal Lake has assembled an all-star team of geologists led by Dr. Lightfoot and has also partnered with **HEG Exploration Services**, a group that specializes and excels in all aspects of high-level mineral exploration in the rugged terrain of NW B.C.

**Drilling confirms new discovery  
at Burgundy Ridge**

**Ken Zone features high-grade  
Gold, Copper and Silver  
in iron carbonate veins**

HEG organized and oversaw **Crystal Lake's** October drill program at Burgundy Ridge and the Northwest zone with military-style precision in challenging weather conditions, and they'll be leading the discovery charge at the Newmont Lake Project in **2019**.

Ridge is just the beginning. This project is primed for multiple new discoveries which is why we're so excited to be involved. We expect **Crystal Lake** to be at the forefront of an exceptionally busy and rewarding **2019** in the heart of the Golden Triangle."

"Knowledge and execution will drive value for shareholders," stated HEG's Cole Evans. "Burgundy
